***DETAILED ACTION***

***Response to Arguments***

1. Applicant's arguments filed November 3, 2004 have been fully considered but they are not persuasive. The Examiner has thoroughly reviewed Applicant's arguments but firmly believes that the cited reference reasonably and properly meet the claimed limitation as rejected.

Applicant's argument – input signals are not sampled using a common post-processing clock which is at least twice as fast as the fastest operating clock by Lew.

Examiner's response – Lew discloses a method and structure for synchronizing multiple digital signals, which are generated by sources 54 and 55 in Fig. 3. The digital signals sampled by a clock signal (62 and 64 in Fig. 3) at a rate that's six to eight times higher than the actual bit rate of the incoming digital information (Page 9, L 10-20). The clock signal (62 and 64 in Fig. 3) constitutes claim limitation: "a common post processing clock" since applicant failed to explicitly define that a common clock is the same and only clock signal. Although clock signal 62 and 64 are generate by two separate oscillators, they have the same property and generate the same frequency-sampling rate output. Therefore, clock signal 62 and 64 constitutes a common clock signal. Applicant is reminded that the Examiner is entitled to give the broadest reasonable interpretation to the language of claims.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Lew et al. (WO 92/17951) (ISDS).

Regarding claim 1, Lew et al. disclose a method for synchronizing a plurality of digital input signals, which are formed by sampling with a dedicated operating clock in each case (54 and 55 in Fig. 3), comprising:

forming digital auxiliary signals by sampling the digital input signals with a common post-processing clock, which is at least twice as fast as the fastest operating clock (Pg 9, L10-15), and

forming synchronized digital output signals (59 and 60 in Fig. 3) which correspond to the digital input signals by interpolating each digital auxiliary signal (110 and 112 in Fig. 3; Pg 9, L6-9).

***Allowable Subject Matter***

4. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
